

IN THE SPECIFICATION:

Please replace the Summary of Invention section on page 4, line 22 through page 5, line 24 with the following amended section:

--In consideration of the foregoing, the object of the present invention is to solve the aforementioned drawbacks, namely to prevent a situation where the printing is not possible even though the print data are transmitted in the course of program viewing and to allow the user to properly prepare the kind and number of print sheets for the printer in advance.

The above-mentioned object can be attained, according to the present invention, by a data receiving apparatus comprising:

~~reception means for receiving a data train including first data and second data for printing, the data train further including identification data for identifying presence or absence of the second data in the data train;~~

~~display control means for causing display means to display an image relating to the first data in the data train received by the reception means;~~

~~print control means for causing print means to print an image relating to the second data in the data train received by the reception means; and~~

~~control means for causing the display means to display the image relating to the first data and executing an informing operation, to an operator, of the information on the second data according to the identification data in the received data train.~~

a receiving unit adapted to receive television broadcasting data which was subjected to multiplexing;

an acquiring unit adapted to acquire print data and program attribute

information, included in the television broadcasting data received by said receiving unit;

an analyzing unit adapted to analyze print additional information for printing of the print data, included in the program attribute information acquired by said acquiring unit; and

a display control unit adapted to output, to a display device on the basis of the print additional information analyzed by said analyzing unit, display data associated with the print additional information together with program data associated with the television broadcasting data received by said receiving unit.

Other objects of the present invention, and the features thereof, will become fully apparent from the following detailed description of embodiments, to be taken in conjunction with the accompanying drawings.--
